

IMPORTANT:

(Read this before you edit anything)

1. Editing Colors & Fonts (via LESS)

This template is an advanced HTML5 template powered by some modern features such as CSS3, LESS and AJAX to render the styles, colors, fonts and some additional visual enhancements. LESS and AJAX will work only from server side, means **you have to upload all files to a real web hosting server in order to view proper colours and fonts** rendering of this template. If you just test them from your local computer you will not be able to see proper colours or fonts, but this is not at all any errors. Please upload the template to a web server and edit it there and check the preview from there. Everything will work properly then, we have tested it and 100% OK.

2. Replacing Placeholder Images

IMPORTANT: In the PDF user-guide, we have described each and every step of replacing placeholder images with your own. Still, If you find it difficult to setup the images in your website, please send a support ticket so that **we can send you the pack of original live preview of our template with stock images** (that is running in our server with all images). You can easily replace those images with your own. We will send it to you if you just send a support ticket requesting images, send the ticket via <http://designova.net/support.html>
